The present sequence is the murine chisel protein (Cs1), that is a CC member of the EF-Hand protein super family and is involved in signalling pathways. Csl protein is localised to the nucleus and does not show C significant homology to any known protein. Structural homology between CC csl and scallop regulatory myosin light chain is however detected. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle of disferentiation or adaptive processes that maintain muscle components. This sequence can be used in the detection, diagnosis, CC prophylactic and therapeutic treatment of diseases such as those CC involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, compositive such as Duchenne muscular dystrophy, and Becker's myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, cmyofiber atrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of transgenic animals and for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the human chisel protein (Cs1), that is a member of the EF-Hand protein super family and is involved in signalling pathways. Csl protein is localised to the nucleus and has 86% homology to the mouse Csl. Structural homology between Csl and scallop regulatory myosin light chain is also detected. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects of differentiation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, keletal myopathies such as Duchenne muscular dystrophy and Becker's myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, myofiber atrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of
                                                                                                                                                                                                                                                                                                     Human 66214

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method is used for testing the predisposition of mammals and preferably humans for a heart disease or for an acute state of such a disease. It is also useful to treat disease of the heart such as congestive heart failure, dilative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiomyopathy, specific heart muscle disease, rhythm and conduction disorders, syncope and sudden death, coronary heart disease, systemic arterial hypertension, pulmonary hypertension, pulmonary heart disease, valvular heart disease, congenital heart disease, pericardial disease and endocarditis. Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicament for the treatments of the stream of the process of the invention are useful for the development for medicaments for the treatments of the stream of the stre

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the xenopus chisel protein (CS1), that is a CC member of the EF-Hand protein super family and is involved in signalling CC pathways. CS1 protein is localised to the nucleus and does not show CC significant homology to any known protein. Structural homology between CC CS1 and scallop regulatory myosin light chain is however detected. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. CG1 functions in regulation aspects CC of differentiation or adaptive processes that maintain muscle CC homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those CC involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular dystrophy and Becker's Skeletal myopathies such as Duchenne muscular dystrophy, myocarditis, CC myofiber atrophy, heart failure, cardiac hypertrophy, myocarditis, CC myofiber atrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of transgenic animals and for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ş
                                       THE PRINCIPLE OF A CONTROL OF A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptide and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopolesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; in treatment of leukaemias. ANU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, set, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2001-476164/51.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence given is a full length translation from the megakaryocyte continuating factor (MSF) precursor. The sequence covered by exons II, II and IV encodes megakaryocyte stimulating factor (MSF). This continuating factor (MSF) this continuating factor (MSF). This continuating coden following exon IV. The cDNA sequence given contains content of the metatory leader, an initiating methionine proceeding exon II and a content of the colony stimulating factor (meg-CSF). Exon I contains the initiating methionine, and encodes a colong stimulating factor (meg-CSF). Exon I contains the initiating methionine, and encodes a colong stimulating factor (meg-CSF). Exon I contains the initiating methionine, and encodes a colong the original meg-CSF includes exons II-IV and is thought to terminate in the region between amino acid residues 134 - 147. The contains the region between amino acid residues 134 - 147. The contains the region between amino acid residues 134 - 147. The contains the region between amino acid residues 134 - 147. The contains the processing of this gene may be cleaved in different ways to yield a family of mRNA's each encoding a different MSF protein. Exons the contains to be related to the activity of the factor and are also implicated in the stability, folding and processing of the sprocessing of the majorate structure of the resulting factor, ie. one or more of these exons may contain sequences which direct processing of the appropriate structure of the resulting factor, ie. one or more of these exons may contain sequences which direct processing of the appropriate structure of the cellular matrix or extracellular matrix processing. Both naturally cocuring and mon-naturally occuring MSF's may be characterised by which the exons spliced together in different commence, with the exons spliced together in different commence of the majorate of the 
                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

                                                                                                                                                                   CC The invention relates to a method of treating osteoarthritis via the Cadministration of a composition comprising the camptodactyly-arthropathy-CC coxa vara-pericarditis (CACP) protein, or portions of the CACP protein. The composition may further comprise a local anaesthetic. The composition of the invention may be administered via intra-articular or intravenous conjection. The human CACP protein is identified in the invention as conjection. The human CACP protein is identified in the invention as conjection. The human CACP protein is identified in the invention as conjection. The gene encoding conjection (MSF) is located on chromosome 1q25-31, and mutations in this gene are responsible for the heritable disorder camptodactyly-cathy-coxa vara-pericarditis, in which patients have symovial conjections of inflammation. CACP protein (MSF) contain (MSF) contain a symovium lubricant, and can be used to lubricate tissue and conjoints in the treatment of osteoarthritis. The composition may be caplied to reduce the symptoms of osteoarthritis (e.g., joint pain, conjoint damage). The present sequence conjoint damage). The present sequence is not given in its entirety in figure 4 of the composition, although a GenBank accession number was given. This sequence obtained from GenBank (U70316).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Clubricating molety and has a polypeptide sequence comprising 1-76
Crepeats of a motif having at least 50% identity to the sequence KEPAPTT
C(AAB29774). The invention also relates to a nucleic acid encoding a
thuman MST-derived tribonectin; a biocompatible composition comprising a
Chuman MST-derived tribonectin; a biocompatible composition comprising a
CC human MST-derived tribonectin; a biocompatible composition comprising a
CC human tribonectin for inhibiting tissue adhesion formation; and a method
CC of diagnosing osteoarthritis or a predisposition to osteoarthritis by
CC measuring the amount of MSF or its fragment in a biological sample of a
CC indicates the presence of or predisposition to developing
CC indicates the presence of or predisposition to developing
CC creatment of osteoarthritis, where they may be used for lubricating
CC mammalian joints, such as articulating joints of humans, dogs or horses.
CC The tribonectin, when formulated as a membrane, foam, gel or fibre, is
CC useful for inhibiting adhesion between two surfaces such as the injured
CC tissues of a mammal, where the injury is caused by a surgical insertion
CC or trauma, or an artificial device e.g., an orthopaedic implant. In
CC particular, one of the surfaces is pericardial tissue. DNA encoding a
CC tribonectin may be used in gene therapy. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc polypeptides and antibodies to the polypeptides are useful for condensity of the presence of or predisposition to a disease associated condensity of the presence of or predisposition to a disease associated condensity of the presence of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antagonists) that bind to them. Cells carpressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the mucleic acids encoding the polypeptides and cells genetically the mucleic acids encoding the polypeptides and cells genetically considered to express them are also useful for producing the proteins. They may be used to therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in the construction of the construction and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU3304 represent the amino acid or sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                              cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines competite therapy. The polypeptides have various cytokine-like activities e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity instructions and/or activity in the diagnosis and/or
                                                                                                                                                                                                                                                                                           Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 suitable search parameters, where plant sequences having an greater by a factor of 3 than the Evalue of most similar no sequences are selected. The polypeptides or nucleic acids er are "useful for identifying modulators. The identified modulators are the sequence are modulators.

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II) may be therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC Mote: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at figure in the printed produce other traits patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at figure in the printed produce and produce the sequence of the lovention of the printed CC specification, but was obtained in electronic format directly from WIPO CC at figure in the printed produce and produce the sequence of the lovention of the printed content of the printed produce of the printed printed printed printed produce the printed pri

//lab_host="NOrgan: eye; Vector: pT7T3-Pac (Pharmacia) with a
modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-E-NXO is a cDNA library containing the following
tissue(s): fetal eyes. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 trail. The
sequence tag for this library is AGANTCAAGA. This library
was created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /tissue_type="fetal eyes"

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.

//note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a
modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-E-DXO is a cDNA library containing the following
tissue(s): fetal eyes. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonuc/Ecotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library as AGANTCAAGA. This library
was created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone="UI-E-DX0-agn-i-12-0-UI"
